

# VINCI CABLING CONSIDERATIONS

## GARLAND TOPOLOGY

✓ OK

Bulbs count lower than 128 -> total cable length (L): max 250m  
Bulbs count higher than 180 -> NOT SUPPORTED

✗ NOT OK

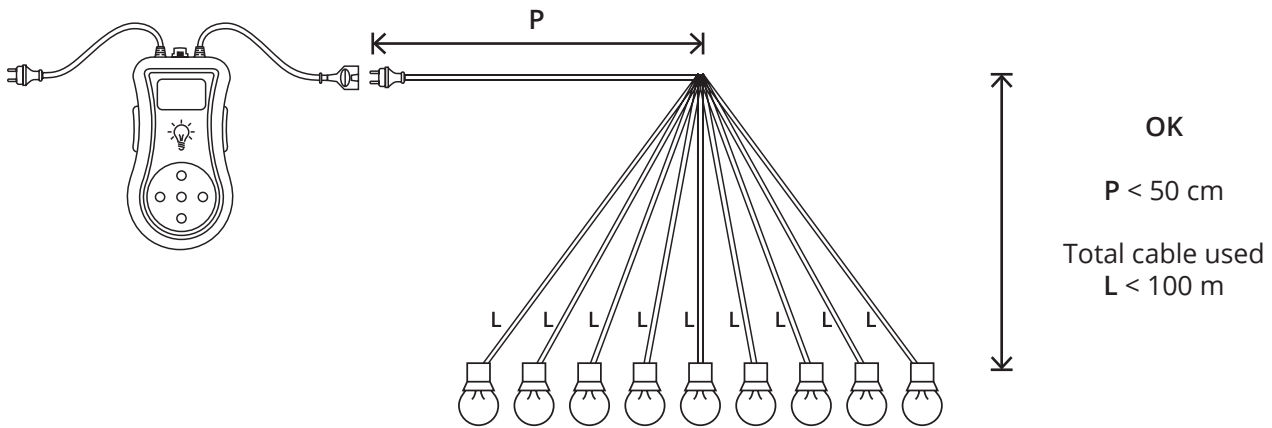

✗ NOT OK

# DROP DOWN TOPOLOGY

✓ OK

- Bulb count must be lower than 64!
- Total cable used (L) must be lower than 100m!
- Length of cable in between controller and split point (P) must be lower than 50cm !

✗ NOT OK

$P > 50 \text{ cm} = \text{BAD}$

✗ NOT OK

Multiple Split points:  $Q > 20 \text{ cm} = \text{BAD}$

## OTHERS

✘ NOT OK

No controller behind other controller!

## NOISY POWER

✘ NOT OK

When the system is used in environments where the power is dirty (harmonic distortion, voltage spikes, voltage drops,..) the connected bulbs can become unresponsive or slowly responsive.

-> Use Vinci Power Cleaner  
OR

-> Isolated the Vinci controller from the noise sources

✔ OK
