

# Health & Safety Product Sheet

## Bubble Fluid Concentrate

### Technical information about the safety when using bubble fluid

This product is a universal manufactured fluid based on Tensid, which is used to create a bubble-effect.

This product is not a dangerous fluid based upon the Chemical regulation, the Dangerous Substances regulation, and the European guidelines for dangerous substances.

This product is biologically fast degradable and falls, according to the renewed OECD screening tests, under the OECD class as easily degradable ("readily biodegradable").

Any harm to the condition of water, in particular regarding the ecosystem and the drinking water supply is not present.

The raw materials included in this product are at least 90% biologically degradable, according to the requirements of the Tensid-resolution (TensV) in the wash and detergent law (WRMG).

The raw materials are not listed in the MAK-list. This product is non-flammable and is not harmful to your health when used in a proper manner.

Preventive measures while handling this product are not necessary. On smooth floors, slip hazard can occur by the accumulated/spilt product.

The product information relies on today's conditions of our knowledge and refers to the product in the delivering condition. This product information is merely intended to describe the product in relation to the safety requirements and not to give fully detailed product characteristics.
